

The desk doesn't sleep. Neither do our agents.

Always-on monitoring for institutional books. Risk, exposures, news, operational events. Policy-bound escalation when something needs human eyes. Built on Wall Street.

Put an agent on the book →

ALWAYS-ON AGENTS FOR INSTITUTIONAL ASSET OPERATIONS

§ 01 · ENGAGEMENT

TWO WAYS IN

Pick the shape of the work.

FIXED SCOPE,
FIXED FEE.

§ 01 · DIAGNOSTIC

Monitoring Diagnostic

Two to three weeks

We assess what your institutional book needs watched, what signals are missing, where escalation gaps live, and which surfaces are ready for agent delivery.

Output is a prioritised monitoring architecture with measurable targets in coverage, signal-to-escalation time, and false positive rate.

FIXED SCOPE, FIXED FEE.

§ 02 · BUILD

First Production Monitoring Agent

Six to eight weeks

We deploy one production-ready monitoring agent for one specific institutional surface: position monitoring, reserves, reconciliation, regulatory events, or exposure breaches.

Includes news ingestion, error system integration, policy-bound escalation logic, audit trail, and measurable improvement in coverage or response time.

FIXED SCOPE, FIXED FEE.

§ 02 · STANDARD

WHAT THE WORK DELIVERS

What changes when agents watch the book.

COVERAGE, SPEED,
CONTROL, CLARITY.

§ 01

Coverage

Continuous monitoring across the surfaces your team can't watch alone.

§ 02

Speed

Signal to escalation in minutes, not the next morning.

§ 03

Control

Policy-bound escalation with audit trails ready for regulator review.

§ 04

Clarity

Leadership visibility across exposures, events, and operational risk.

§ 03 · OPERATOR

WHO BUILDS THE AGENT

Operating discipline, brought across.

BUILT ON WALL STREET.
NOW APPLIED HERE.

Eight years inside a global investment bank, building LLM analytics platforms, decision systems, and monitoring infrastructure for institutional teams. Direct work across high-value payments, transaction monitoring, and operational risk. Now applying that operating discipline to always-on agents inside regulated financial institutions.

[ABOUT THE OPERATOR →](#)

§ 04 · USE CASES

WHAT THE AGENTS CATCH

Four signals. One in full. Three more.

SAME MACHINERY.
DIFFERENT SURFACES.

USE CASE 01 · OVERNIGHT POSITION MONITORING, NEWS-CORRELATED

● LIVE · 03:47 UTC

SIGNALS	DECISION CORE	EXECUTION
market data marks, vol, OIS, FX news feeds Reuters, BBC, primary sources internal system events exception flags limit utilisation, soft breach error logs failed messages, recon mismatches settlement events cleared, failed, pending	entity resolution news + ticker + book line signal correlation across news, market, position policy orchestration thresholds, windows, suppression LLM narrative review reads 50 items, surfaces 3 that matter anomaly scoring vs historical mark behaviour human approval gates fire above hard limit, out of hours	action notify / escalate / suppress / route audit trail written to system of record outcome telemetry acted on, false positive, time-to-ack evidence packet regulator-ready bundle
CONTROL SURFACE · policy versioning · escalation paths · evidence retention (BCBS 239) · kill switches (head of risk, ops head)		

USE CASE 01 · IN FULL	TRIGGER	WHAT THE AGENT DOES	WHAT GETS AVOIDED
	BoE statement at 03:47 UTC. Severity 4. News entity resolves to GBP rates positions on the book.	Reads 50 wire items, surfaces the 3 that matter, scores mark behaviour against history, satisfies human gate by the on-call PM, builds the evidence packet.	The PM finding out from a Bloomberg ping at 8am, with the position already underwater.

USE CASE · 02	STABLECOIN RESERVES	USE CASE · 03	DECISION SYSTEM RELIABILITY	USE CASE · 04	HIGH-VALUE PAYMENTS
Reserve composition drift before the redemption window opens.		Production decision model drifts past SLO under live load.		Outbound wire over £10M holds in the exceptions queue, 23:14 UTC.	
TRIGGER	Redemption volume +2.5x. Composition drift on a held instrument breaches policy band.	TRIGGER	Model output drifts +12% above baseline. Fallback gate is armed. Regulator inspection due next quarter.	TRIGGER	Wire above policy threshold sits in exceptions out of hours. Sanctions and KYC checks unresolved.
AGENT	Correlates redemption pace with reserve quality. Scores anomaly. Human-gates. Notifies treasury and MLRO with a pre-built evidence pack.	AGENT	Monitors decision SLOs, detects failure modes, triggers the documented fallback, attaches SR 11-7 evidence to the incident record.	AGENT	Prioritises the queue by financial impact. Escalates only items above policy threshold. Attaches sanctions + KYC + ledger checks per event.
AVOIDED	Reserve mismatch reaches social media before it reaches the ops desk.	AVOIDED	Silent fragility in a decision system the regulator opens up next quarter.	AVOIDED	Out-of-hours analysts treating high-value events with the same urgency as low-value ones.
GATED → ESCALATED		FALLBACK ACTIVE		TRIAGED → ESCALATED	
MICA · FCA		SR 11-7 · NIST AI RMF		SEPA · FPS · FEDNOW · SWIFT	

§ 05 · INTAKE

Email a short note about a surface you'd want watched.
